

AMENDMENTS TO THE CLAIMS:

The listing of claims will replace all prior versions, and listings of claims in the application:

LISTING OF CLAIMS:

1. (Currently Amended) A method of processing an electronic image from an electronic device having a display that is visible to a user, the method comprising the steps of:

selecting ~~one or more~~ property options from ~~one or more~~ image forming devices from the display to create ~~one or more~~ multiple imaging formats of the electronic image; ~~and~~

generating the ~~one or more~~ multiple imaging formats of the electronic image on the image forming devices in response to a selected command, wherein at least one of the image forming devices has at least two imaging formats, different from each other; and

imaging, automatically without a user intervention, the multiple formats on the image forming devices including the image forming device having at least two imaging formats.

2. (Currently Amended) The method of claim 1, further comprising the step of,

encapsulating the selected properties of the image forming devices into a selected objects.

3. (Currently Amended) The method of claim 2, further comprising the step of,

generating a visual representation of the selected objects on the display, wherein selection of the visual representations initiates the generation of the ~~one or more~~ multiple imaging formats of the electronic image on the image forming devices.

4. (Currently Amended) The method of claim 1, wherein the image forming devices comprises ~~comprise~~ at least two one of a printer, a copier ~~and a~~ facsimile machine, a personal data assistant (PDA), a mobile telephone and a digital

camera.

5. (Currently Amended) The method of claim 1, wherein the ~~one or more~~ property options of the image forming devices ~~comprises~~ comprise a stock selection, a color selection, and a quantity selection of each imaging format.

6. (Original) The method of claim 1, wherein the electronic image is an electronic document.

7. (Original) The method of claim 3, wherein the visual representation is a button on a toolbar.

8. (Cancelled)

9. (Currently Amended) The system of claim 118, wherein the control facility resides in image forming device.

10. (Currently Amended) The system of claim 118, wherein the control facility resides in the image host device.

11. (Currently Amended) ~~The~~ An image reproducing system of claim 8, wherein the comprising:

an image forming device comprises ~~comprising~~ one of a printer, a copier, and a facsimile machine, a personal data assistant (PDA), a mobile telephone and a digital camera;

an input device;

an image host device having a display; and

an image control facility for configuring the one or more image forming devices for generating one or more depictions of an image from the image host device when an image reproducing command is selected.

12. (Canceled)

13. (Currently Amended) The system of claim 118, wherein the image

reproducing command is represented by a button on a toolbar.

14.(Currently Amended) The system of claim 11~~8~~, further comprising an imaging control library that provides visual representations of one or more property configurations for the one or more image forming devices.

15.(Currently Amended) The system of claim 14~~15~~, wherein the one or more visual representations of the one or more image forming devices are one or more visual representations of an object that encapsulates attributes of the one or more image forming devices property configurations to generate multiple imaging formats of an image from the image host device.

16.(Original) The system of claim 15, further comprising a drag and drop facility for supporting the dragging and dropping of the selected visual representation of the imaging control facility library, by the user input device.

17.(Currently Amended) The system of claim 11~~17~~, wherein the imaging control facility configures the one or more image forming devices to generate the one or more depictions of the image from the image host device in response to a drag and drop of the selected visual representation.

18.(Cancelled)

19.(Currently Amended) The computer readable medium of claim 21~~18~~, further comprising the step of,
encapsulating the selected properties of the one or more image forming devices into a selected object.

20.(Original) The computer readable medium of claim 19, further comprising the step of,
generating a visual representation of the selected object on the host device, wherein the selection of the visual representation initiates the generation of the one or more imaging formats of the electronic image on the one or more image forming devices.

21. (Currently Amended) ~~A~~The computer readable medium of claim 18 wherein the holding computer executable instructions for performing a method on an image reproduction system comprising one or more image forming devices, comprises one of a printer, a copier and a facsimile machine, a host device having a display to a view an image in an electronic format and an input device, said method, comprising the steps of:

displaying properties of the one or more image forming devices on the host device;

selecting the properties of the one or more image forming devices to generate one or more imaging formats of the image from the host device; and

generating the one or more imaging formats of the image at the one or more image forming devices in response to a selected command, wherein at least two distinct imaging formats are located on one image forming device.

22. (Currently Amended) The computer readable medium of claim 2148, wherein the host device has a microprocessor.

23. (Currently Amended) The computer readable medium of claim 2148, wherein an image is an electronic document.

24. (Original) The computer readable medium of claim 20, wherein the visual representation comprises one of a button and an icon.

25. (New) The method of claim 1, wherein the image forming device having multiple formats is one of a copier or a printer and the multiple formats are a color image format and a black-and-white image format.

26. (New) The system of claim 11, wherein the image control facility is configured to generate a plurality of formats to generate more than one depiction of the image in more than one format, and at least one image forming device was at least two imaging formats different from each other.

27. (New) The computer readable medium according to claim 21,

wherein the at least one image forming device are a plurality of image forming devices including at least one of a printer, a copier, a facsimile machine, a personal data assistant (PDA), a mobile telephone and a digital camera.
